Before starting the setup instructions, please make sure that your wireless card is on. Most new laptops come with a hard shut off switch on the sides or front of the machine. For example the Lenovo T60’s switch can be found on the front here:

Please note that even if you input the settings correctly, if this switch is not turned on wireless will not work properly.

To begin wireless setup:

1. Click on the **Start Menu** and choose **Control Panel**
2. Double click on **Network and Sharing Center**. If your screen does not look like this, navigate to the left side of the window and make sure that **Classic View** is selected.

3. Select **Set up a connection or network**
4. Select **Manually Connect to a Network** and click **Next**

5. Fill in the fields on this screen using the following settings:
   - **Network Name:** MSBWIRELESS
   - **Security Type:** No Authentication
   - Select both **Start this connection automatically** and **Connect even if the network is not broadcasting** at the bottom. Before clicking **Next** this screen should look like this:
6. Select **Connect to**

```plaintext
Successfully added MSBWIRELESS

- **Connect to...**
  Open the "Connect to a network" dialog so I can connect.

- **Change connection settings**
  Open the connection properties so that I can change the settings.
```
