

What Air Media Does

Allows students to wirelessly connect to projectors to make presentations easier than ever before!

How to Use Air Media

From the Crestron, send Air Media to both projectors

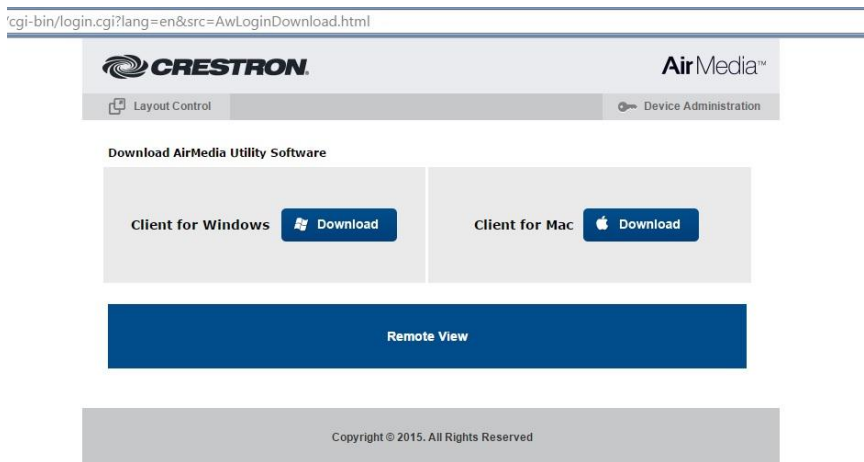

Look at the top line to find the IP address to type in

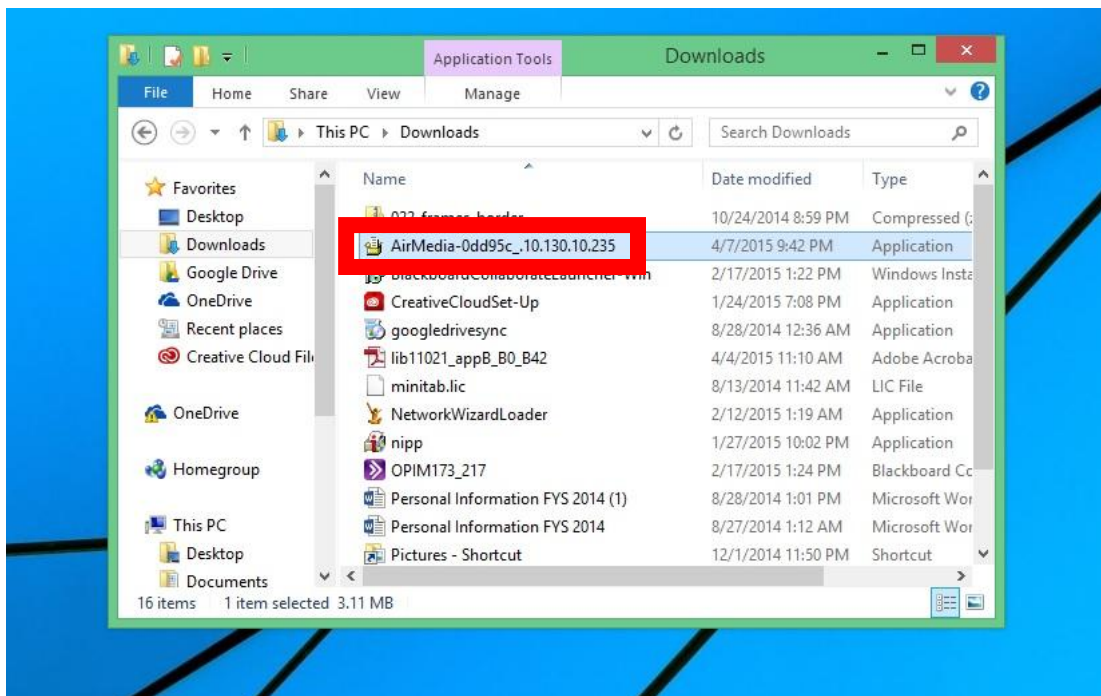

On your laptop, type the IP address into your search bar

Download Client for the appropriate computer type

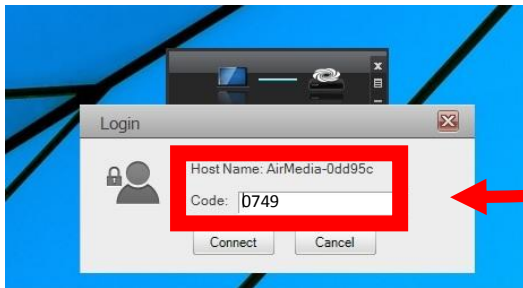

Open the download file (should be called AirMedia-0dd95c_.10.130.10.###)

After the computer finds the AirMedia device, it will ask for the security code

Type in the security code found at the top right of the screen

Click Connect and voila! You can now project without having to leave your seat!

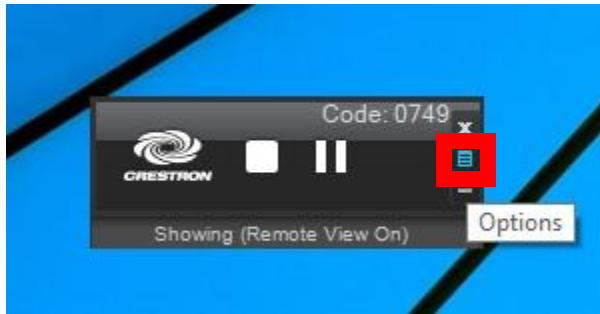

Remote View Function

How to Use Room View Function

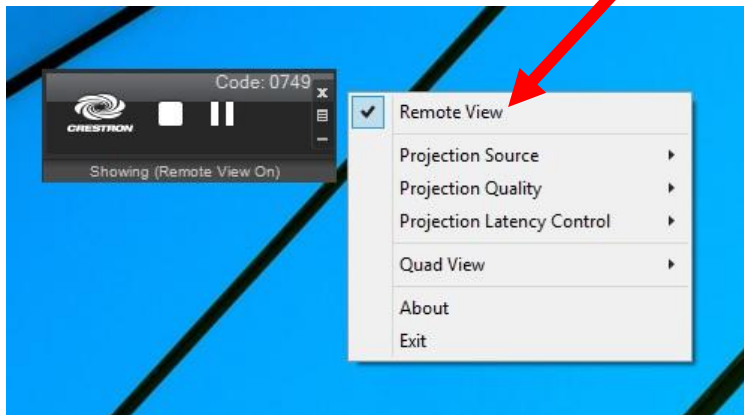

This feature allows you to share your screen with those watching your presentation

To enable

The person presenting: Click on options

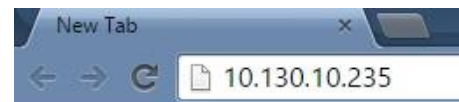

Click on the “Remote View” to enable it

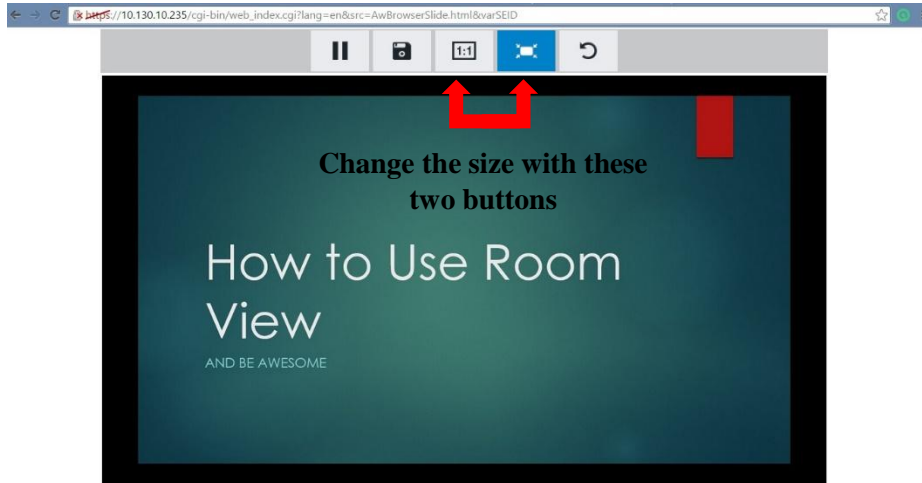

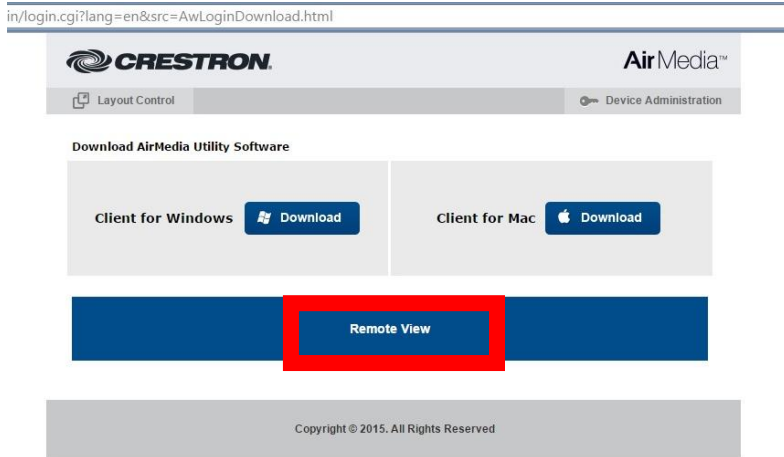

To Use

Those who are watching the presentation: Type the IP address into your internet browser

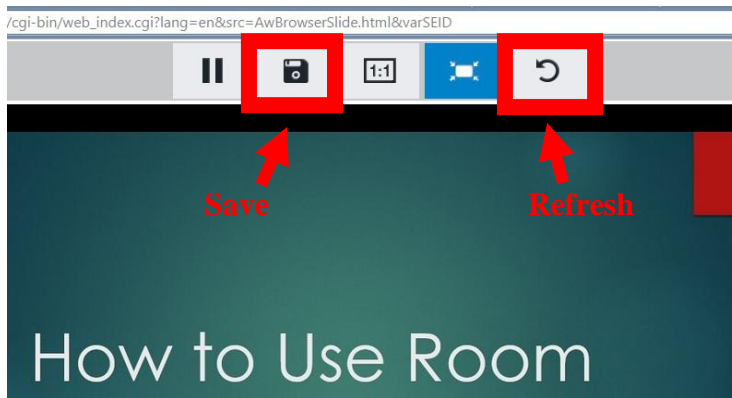

Address: [http://AirMedia-0dd95c \(10.130.10.235\)](http://AirMedia-0dd95c (10.130.10.235))

Click on the Remote View option

Enjoy the presentation!

Note

In order to see what the presenter is showing, you need to refresh the screen after they change slides

The floppy disk allows you to save the image
